**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1-4, 14-16, 24-25, 33-34, 50 are rejected under 35 U.S.C. 102(a) as being anticipated by Sato (6,467,910).

3. Sato (6,467,910) discloses an optical projection arrangement and method wherein:

4. A light beam is generated along a path and has a traverse cross section that is elongate relative to a plurality of beam modifying filter elements lying along a longitudinal axis, the filter elements moving sequentially along a travel path that intersects the light path with the longitudinal axis with the longitudinal axis of the elongate transverse cross section being aligned with transition regions (see Figure 27B) Note that a cross section is determined relative to a chosen intersecting plane, in the above analysis the chosen plane is the surface of the filter elements. The inclination of the light source relative to this surface produces an elongate cross section.

6. Claims 42-49, 51 are allowed.
